

Asset Management

AssetPlus™

Delivering integrated asset management solutions
for the healthcare market

In partnership with GE Healthcare

Complete Asset Management

A complete asset management solution from Centriq provides you with a real-time, structured and detailed inventory of your entire installed base of equipment. At the heart of this is the AssetPlus software from GE Healthcare which has been specially designed for the healthcare environment catering for the requirements of departments such as Biomedical, Facilities and IT. With over 15 years in the field, AssetPlus has evolved thanks to the feedback of users into a market leading system installed in over 450 sites worldwide.

AssetPlus enables complete control of your assets, tracking their full life-cycle and providing powerful reporting tools.

Key Features:

- Asset maintenance tracking / work orders
- Scheduling of preventative maintenance
- Contract management, internal/external and SLA configuration
- Loan management/equipment library
- Alert customisation
- Statistics and reporting
- Spares/stores management
- Scheduling biomedical engineers time
- Cost management and financial planning

Manage Compliance

Demonstrate compliance levels against the latest legislation, NHSLA requirements and unique hospital guidelines. Risk management with risk categories allocated to each asset.

Alert Management

User definable traffic light alert system. Set warnings for issues such as service intervals, calibration, MHRA compliance alerts and overdue returns to departments.

Mobile/Remote Access

AssetPlus has a web module to enable staff secure access to the system throughout the hospital. The software also runs on a PDA or tablet PC which is invaluable to biomedical engineers who can use the barcode scanner and update work orders as they go.

RFID & Asset Tracking

The RFID module enables asset tracking around the hospital which greatly improves efficiency and reduces overall costs. This also offers security by identifying when clean equipment is being moved to dirty areas or when high value items leave specific areas.

Integration with 3rd Party software

AssetPlus is already integrated with powerful software such as Business Objects; however we can also integrate the software with most 3rd party database systems such as finance, HR and procurement for an even broader solution.

Powerful Reporting

As well as a rich feature set, it also offers a high degree of configurability to address specific site requirements for reporting and analysis.

Client Testimonials

“With AssetPlus we have a totally coordinated approach with a well supported suite of software, we definitely made the right choice.”

-Great Western Hospitals NHS Trust

“AssetPlus is a useful and effective medical device management tool.”

-Royal Berkshire NHS Foundation Trust
